Keep your Mac safe from intruders, malware, and more! Version 1.2, updated October 12, 2021 Secure your Mac against attacks from the internet and physical intrusion with the greatest of ease. Glenn Fleishman guides you through configuring your Mac to protect against phishing, malware, network intrusion, social engineering, and invaders who might tap physically into your computer. Glenn teaches how to secure your data at rest and in motion. Learn about built-in privacy settings, the Secure Enclave, FileVault, sandboxing, VPNs, recovering a missing Mac, and much more. Covers Catalina, Big Sur, and Monterey. The digital world has never seemed more riddled with danger, even as Apple has done a fairly remarkable job across decades at keeping our Macs safe. But the best foot forward with security is staying abreast of past risks and anticipating future ones. Take Control of Securing Your Mac gives you all the insight and directions you need to ensure your Mac is safe from external intrusion and thieves or other ne'er-do-wells with physical access. Security and privacy are tightly related, and Take Control of Securing Your Mac helps you understand how macOS has increasingly compartmentalized and protected your personal data, and how to allow only the apps you want to access specific folders, your contacts, and other information. Here's what this book has to offer: • Master a Mac's privacy settings • Calculate your level of risk and your tolerance for it • Learn why you're asked to give permission for apps to access folders and personal data • Moderate access to your audio, video, and other hardware inputs and outputs • Get to know the increasing layers of system security through Catalina, Big Sur, and Monterey • Prepare against a failure or error that might lock you out of your Mac • Share files and folders securely over a network and through cloud services • Set a firmware password and control other low-level security options to reduce the risk of someone gaining physical access to your Mac • Understand FileVault encryption and protection, and avoid getting locked out • Investigate the security of a virtual private network (VPN) to see whether you should use one • Learn how the Secure Enclave in Macs with a T2 chip or M-series Apple silicon affords hardware-level protections • Dig into ransomware, the biggest potential threat to Mac users, but still a largely theoretical one •

Are the disciplines of education ghosts of a productive past or creative and useful forms of inquiry? Are they in a demographic and organisational crisis today? The contribution of the 'foundation disciplines' of sociology, psychology, philosophy, history and economics to the study of education has always been contested in the UK and in much of the English-speaking world. But such debates are now being brought to a head in education by the demographic crisis. Recent research has shown that with the an ageing population of education academics, in ten years' time, there could be very few disciplinary specialists left working within faculties of education in UK universities. But does that matter and is the UK no more than a special case? How does this 'crisis' look from Europe where the disciplines of education are more embedded, and from the USA with its more diverse higher education system? In this book, leading scholars – including A.H. Halsey, David Bridges, John Furlong, Hugh Lauder, Martin Lawn and Sheldon Rothblatt – consider the changing fortunes of each discipline as education moved away from the dominance of psychology in the 1930s, 1940s and 1950s as a result of the growing importance of the other disciplines and new social questions, and how the changing epistemological and political debates of the last twenty years have resulted in their progressive demise. Finally, the book confronts the question as to whether the disciplines have a place in education in the twenty-first century. The book brings the coming crisis into the public view and explores the issue of the past, current and future relevance of the disciplines to the study of education. It will be of interest to all international academics and researchers in the field of education and the contributory disciplines as well as to students on educational research methods courses.

Themes in European History treats in thematic fashion a period of great change and upheaval in Europe. A collection of twelve essays by five leading historians, this textbook: * highlights important developments and changes that occurred * sets these changes in their social and cultural context as well as in the political framework * concentrates on the most important powers in Europe * completes each essay with suggestions for further reading to guide your students into continuing their research. Whereas other textbooks of this period focus on the political events, Themes in Modern European History uses a comparative history of institutions and societies, with emphasis on the cultural changes as well. Students are provided with the whole picture of events and are made aware of the wider consequences of the changes taking place - enabling them to understand all aspects of the dramatic transformation of Europe from 1890-1945.

Meet Maud: a guinea pig who inexplicably wears a judo suit - and not everyone understands or approves. When Maud is thrown into a new and confusing situation, it takes brave decisions and serendipitous encounters for her to find her place and embrace her individuality. The charming characters of Magenta Fox, whose work is evocative of Raymond Briggs and Janet Ahlberg, perfectly offset Zadie and Nick's warm, wry prose. Weirdo is an endearing story about the quiet power of being different by two veteran writers, and introduces an exciting debut illustrator. Together they have created a picture book that adults and children alike will treasure.
