If the pattern of inheritance (dominant or recessive) is known, the phenotypic ratios can be inferred as well. For a monohybrid cross of two true-breeding parents, each parent contributes one type of allele. In this case, only one genotype is possible. All offspring are Yy and have yellow seeds.

Today, we know that inheritance is far more complex than what Mendel saw in his pea plants. Here are some of the things scientists have learned about how traits are passed from one generation to the next. Some of our genes come only from Mom. Mendel believed that parents contribute equal numbers of factors to their offspring.

2 4) Magic runs in families. This is influenced by a complex pattern of inheritance. There is a single gene that codes for magical ability (M= magical (wizard or witch); m= non-magical (Muggle). However, there is also a second regulatory gene involved in the expression of magical ability (S= magic ability expressed), s= magic ability not expressed). a) Hermione Granger is an impressive young ...
