The theme of this volume is Trait-Based Ecology - From Structure to Function. Advances in Ecological Research is one of the most successful series in the highly competitive field of ecology Each volume publishes topical and important reviews, interpreting ecology as widely as in the past, to include all material that contributes to our understanding of the field Topics in this invaluable series include the physiology, populations, and communities of plants and animals, as well as landscape and ecosystem ecology

This second edition laboratory manual was written to accompany Food Analysis, Fourth Edition, ISBN 978-1-4419-1477-4, by the same author. The 21 laboratory exercises in the manual cover 20 of the 32 chapters in the textbook. Many of the laboratory exercises have multiple sections to cover several methods of analysis for a particular food component of characteristic. Most of the laboratory exercises include the following: introduction, reading assignment, objective, principle of method, chemicals, reagents, precautions and waste disposal, supplies, equipment, procedure, data and calculations, questions, and references. This laboratory manual is ideal for the laboratory portion of undergraduate courses in food analysis.

Having a balanced understanding of legal and ethical concepts and applying them to a multitude of real-life clinical and administrative situations is essential to any health professional. This text provides this balance by helping health professionals understand both the intention as well as the realities of the law. All the while, preparing them for the major ethical considerations and dilemmas they may encounter. Written in a straightforward manner aimed at health professionals in a variety of settings, this book introduces the reader to many topics affecting health care today such as the legal system, patient/physician relationship, professional liability and malpractice prevention, confidentiality, physician's public duties, medical records, and bioethical issues. Through this introduction healthcare professionals will better understand the ethical obligations to the patient, the employer, and themselves. For Medical Assisting students.

Active touch can be described as the control of the position and movement of tactile sensing systems to facilitate information gain. In other words, it is finding out about the world by reaching out and exploring—sensing by ‘ touching ’ as opposed to ‘ being touched ’ . In this Research Topic (with cross-posting in both Behavioural Neuroscience and Neurorobotics) we welcomed articles from junior researchers on any aspect of active touch. We were especially interested in articles on the behavioral, physiological and neuronal underpinnings of active touch in a range of species (including humans) for submission to Frontiers in Behavioural Neuroscience. We also welcomed articles describing robotic systems with biomimetic or bio-inspired tactile sensing systems for publication in Frontiers in Neurobotics.

A summary of recent significant scientific and economic results accompanied by a list of geologic and hydrologic investigations in progress and a report on the status of topographic mapping.
