Although the body has been the focus of much contemporary cultural theory, the models that are typically applied neglect the most salient characteristics of embodied existence—movement, affect, and sensation—in favor of concepts derived from linguistic theory. In Parables for the Virtual Brian Massumi views the body and media such as television, film, and the Internet, as cultural formations that operate on multiple registers of sensation beyond the reach of the reading techniques founded on the standard rhetorical and semiotic models. Renewing and assessing William James ' s radical empiricism and Henri Bergson ' s philosophy of perception through the filter of the post-war French philosophy of Deleuze, Guattari, and Foucault, Massumi links a cultural logic of variation to questions of movement, affect, and sensation. If such concepts are as fundamental as signs and significations, he argues, then a new set of theoretical issues appear, and with them potential new paths for the wedding of scientific and cultural theory. Replacing the traditional opposition of literal and figural with new distinctions between stasis and motion and between actual and virtual, Parables for the Virtual tackles related theoretical issues by applying them to cultural mediums as diverse as architecture, body art, the digital art of Stelarc, and Ronald Reagan ' s acting career. The result is an intriguing combination of cultural theory, science, and philosophy that asserts itself in a crystalline and multi-faceted argument. Parables for the Virtual will interest students and scholars of continental and Anglo-American philosophy, cultural studies, cognitive science, electronic art, digital culture, and chaos theory, as well as those concerned with the " science wars " and the relation between the humanities and the sciences in general.

How do national stereotypes emerge? To which extent are they determined by historical or ideological circumstances, or else by cultural, literary or discursive conventions? This first inclusive critical compendium on national characterizations and national (cultural or ethnic) stereotypes contains 120 articles by 73 contributors. Its three parts offer [1] a number of in-depth survey articles on ethnic and national images in European literatures and cultures over many centuries; [2] an encyclopedic survey of the stereotypes and characterizations traditionally ascribed to various ethnicities and nationalities; and [3] a conspectus of relevant concepts in various cultural fields and scholarly disciplines. The volume as a whole, as well as each of the articles, has extensive bibliographies for further critical reading. Imagologyis intended both for students and for senior scholars, facilitating not only a first acquaintance with the historical development, typology and poetics of national stereotypes, but also a deepening of our understanding and analytical perspective by interdisciplinary and comparative contextualization and extensive cross-referencing.

Called by many France's foremost philosopher, Gilles Deleuze is one of the leading thinkers in the Western World. His acclaimed works and celebrated collaborations with F é lix Guattari have established him as a seminal figure in the fields of literary criticism and philosophy. The long-awaited publication of What Is Philosophy? in English marks the culmination of Deleuze's career. Deleuze and Guattari differentiate between philosophy, science, and the arts, seeing as means of confronting chaos, and challenge the common view that philosophy is an extension of logic. The authors also discuss the similarities and distinctions between creative and philosophical writing. Fresh anecdotes from the history of philosophy illuminate the book, along with engaging discussions of composers, painters, writers, and architects. A milestone in Deleuze's collaboration with Guattari, What Is Philosophy? brings a new perspective to Deleuze's studies of cinema, painting, and music, while setting a brilliant capstone upon his work.
