This book presents up-to-date information about the catalysis and surface properties of liquid metals and liquid alloys. It is intended for use by chemical engineers and researchers in catalysis, surface science, liquid metals, and chemical process technologies.

The increasing interest in queueing networks with blocking is mainly due to the fact that these models arise naturally in computer systems, communication systems and production systems. This volume, the result of the first international workshop on queueing networks with blocking, presents research consisting of theoretical developments and practical applications. Scientists and practitioners in the areas of computer science, industrial engineering, operations research and management science can benefit from the material collected here.

The goals of the Conference were to foster increased communication and understanding between practitioners and researchers and among various research disciplines, to present and discuss research results, and to identify possible future research activities. The participation and interaction of both high level negotiations practitioners and researchers were considered especially valuable and unique aspects of the Conference. All of the subjects dealt with at the Conference have direct and obvious relevance to improving negotiations outcomes on, and the ability to deal effectively with, such issues as the trans boundary effects (environmental, economic, etc.) of technological risk, security and confidence-building measures, and international economic cooperation- all of which are high on the negotiations agenda of many countries.
